sketchy new horizons in research on sustainable organisations is intended to present and encourage such cross pollination the chapters in this volume are presented in three subsets generally proceeding from the most macro to the most micro in terms of perspective and applicability however this arbitrary division belies the integration from macro through meso or mid range to micro levels that is apparent in these studies macro approaches typically include wider geographic scopes greater numbers of stakeholders and more complex explanatory factors than micro approaches each chapter adopts one or more particular sustainability world view and then grounds these and the other chapter elements within actual organisations therefore the reader is advised to envision not a one dimensional continuum but rather a circle in which the macro view both feeds back and feeds forward to the micro view this volume addresses a number of intriguing and important sustainable organisation phenomena such as multiple sustainable development perspectives changing environmental politics environmental management systems variations voluntary environmental programme performance complex adaptive systems and environmental technology development additionally several models are suggested such as cultivation capabilities and business ecology frameworks
